CLAIM AMENDMENTS

OFFICIAL

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1 (currently amended): A transceiver configuration for a communication terminal, comprising:

an A/D converter ~~outputting~~ outputting a first digital data signal;

a D/A converter;

a controllable oscillator circuit connected to said A/D converter and to said D/A converter, said controllable oscillator ~~oscillator~~ circuit having a reference oscillator with an oscillating crystal as a resonator and outputs a sampling clock received by said A/D converter and said D/A converter;

a digital data processing circuit connected to said A/D converter and to said D/A converter and receives the first digital data signal output by said A/D converter and

Appl. No. 09/840,551

Amdt. Dated June 29, 2004

processes it further and outputs a second digital data signal to said D/A converter; ~~and~~

said A/D converter, said D/A converter, said data processing circuit and said controllable oscillator circuit, apart from said oscillating crystal of said reference oscillator, being constructed as a monolithically integrated circuit so that of said controllable oscillator circuit, only said oscillating crystal is implemented as an external component; and

a frequency section being at least one of a radio-frequency section and an intermediate-frequency section connected to said A/D converter, to said D/A converter and to said controllable oscillator circuit, said frequency section having a frequency converter stage operating with a beat frequency derived from said controllable oscillator circuit.

2 (original): The transceiver configuration according to claim 1, wherein said digital data processing circuit has a digital filter and a digital modulator.

3 (original): The transceiver configuration according to claim 1, wherein said digital data processing circuit has a channel estimator.

Appl. No. 09/840,551

Amdt. Dated June 29, 2004

Reply to Office Action of March 29, 2004

4 (original): The transceiver configuration according to
claim 3, including a data detector connected to said channel
estimator.
